

VASE-LIKE CARRIER FOR LONG STEM CANDY

Abstract

An inexpensive, aesthetically pleasing display assembly (10) is provided in the form of an upstanding carrier (12) supporting at least one comestible article (14) such as a multiple-piece simulated candy bouquet (15). The carrier (12) includes a pair of interconnected, angularly oriented panels (20, 22), with the panel (20) having an uppermost open mouth (72) and an elongated passageway (70). The simulated bouquet (15) comprises a plurality of candy pieces (16) each supported by an elongated stem (18). The bouquet stems (18) are inserted into passageway (70), and the panels (20, 22) are separated so as to form a stable, upstanding, self-supporting display assembly (10).
